UNIT C-116

THOROUGHLY PRACTICAL, BEAUTIFUL AND ECONOMICAL WINDOWS

THE remarkable acceptance by the building public of Truscon Copper Steel Standard Casements lies in the fact that they include all the picturesque beauty and romantic grace of the early casement designs and add to these the durability, economy, flexibility and all-round utility which came with the introduction of steel to architecture. Each one of these qualities came in for its full consideration in the designing of the new type Truscon Casements.

All Standard Units can be Combined to Fill any Size Opening in any Kind of Construction

WINDOW BEAUTY WITH TRUSCON COPPER STEEL STANDARD CASEMENTS FOR EVERY ROOM OF THE HOME

NEW TYPE

TRUSCON COPPER STEEL STANDARD CASEMENTS

QUALITY WINDOWS *for* EVERY HOME

TRUSCON Casements have many distinctive features. They are more practical, fireproof, permanent and weathertight. Casements open outward and thus eliminate interference with drapes. They afford 100% ventilation, maximum fresh air, double the amount of ordinary double-hung windows; open and close easily; do not warp or stick and are easily screened. Casements can be installed in masonry and frame construction, brick veneer, stucco on hollow tile and wood framing, in any kind of weather by inexpensive labor. Outside glazing gives a neat interior finish. All sash and frame rails are deep enough to allow for the use of plate glass.

Truscon Casements are equipped with artistically designed hardware. Bronze hardware if desired. An adjustable brass friction stay is attached to the sash and frame at the top of all hinged units, concealed between the frame and sash when closed. Casements with standard hinges may be readily cleaned from the inside.

The cost of the new type Truscon Casements is virtually lower than that of wooden windows. They are within the reach of everybody who builds with a view of permanence, economy and added beauty.
